Focal Liver Lesions - Cases for Discussion
Prof S.G. Hübscher

Case No	Age/Sex	Clinical Summary
1	56/M	Liver resection for metastatic colorectal carcinoma. Incidental small subcapsular lesion 0.5cm diameter in segment 6.
2	51/F	Liver resection for three lesions in left lobe. Main lesion 8cm. Slide submitted is from a 4.5cm lesion, which had an irregular central scar.
3	37/F	Left lobe resection for 10 cm mass bulging from surface. Slide submitted is from periphery of lesion to include adjacent non-neoplastic liver tissue.
4	45/M	Liver transplantation for autoimmune hepatitis. Incidental nodule 1.2cm diameter in right lobe of liver
5	26/F	Right hemi-hepatectomy specimen. Large mass 12 cm diameter with central scar. Enlarged perihilar and coeliac lymph nodes. Slide submitted is from periphery of lesion to include surrounding non-neoplastic liver tissue.
6	64/F	Liver resection. Large multiloculated cyst 18 cm maximum dimension in left lobe.
7	67/M	Extended right hemi-hepatectomy for hilar lesion causing obstructive jaundice. Slide submitted is from extrahepatic segment of bile duct.
8	25/F	Liver transplantation. Multiple nodules 1-6 cm diameter composed of firm white tissue throughout liver. Previous biopsy elsewhere reported as showing fibrosis ?cause
9	37/M	Liver transplantation. Multiple haemorrhagic nodules throughout liver.
10	28/F	Liver resection. Lesion 2.5cm diameter in left lobe.

Additional Notes:

- Cases 1- 5 will be discussed in Liver Slide Seminar 1
- Cases 6-10 will be discussed in Liver Slide Seminar 2
